Professional Summary

Full Stack Java Developer (2 yrs) building scalable backend services with Java and Spring Boot and frontends with React. Strong in RESTful API design, microservices, and secure coding within Agile/CI-CD workflows. Distinctively combines software engineering with hands-on RPA and intelligent automation (UiPath, Power Automate) — including building AI agents for error detection and root-cause analysis across business-critical processes.

Technical Skills

Backend	Java (8+), Spring Boot, Spring Security, JPA/Hibernate	Frontend	React JS, HTML, CSS, JavaScript
Databases	PostgreSQL, MySQL	Architecture	Microservices, REST APIs
Automation	UiPath, Microsoft Power Automate	Messaging	JMS (foundational)
DevOps	Docker, Git, CI/CD, Maven, Jenkins	Testing	JUnit, Unit Testing principles
AI & Tools	Claude Code, Cursor, AI Agents	Practices	Code Reviews, Agile/Scrum

Experience

Junior Software Engineer – EPAM Systems May 2024 – Present

- Developed and maintained full-stack applications using **Java**, **Spring Boot** and **React JS**.
- Implemented secure REST APIs using **Spring Security** to enforce authentication and authorization controls.
- Designed database models using **JPA/Hibernate** and optimized SQL queries for performance.
- Contributed to CI/CD pipelines to automate build and deployment processes.
- Participated in peer code reviews ensuring adherence to coding standards and security best practices.
- Collaborated with cross-functional stakeholders to align technical solutions with business requirements.
- Cut order processing time by 64% — from 11 minutes to 4 minutes per order — through targeted system enhancements and performance optimization.
- Onboarded to an enterprise **UiPath RPA** project; currently monitoring and maintaining **50+ existing automation processes** to ensure reliability and uptime.
- Developing an **AI agent** integrated with UiPath Orchestrator logs to automate error detection, root-cause analysis, and fix suggestions — reducing manual triage time significantly.
- Building reusable **AI-driven automation components** for business use cases, improving process efficiency and reducing manual intervention across workflows.

Projects

GenCheck — AI Content Detection Platform

- Built a platform that detects AI-generated text and images, structured as 3 backend microservices with a React frontend.
- Designed clean API contracts and modular service boundaries separating detection, processing, and serving concerns for scalability and maintainability.

QR-Based POS Restaurant Ordering System

- Designed and developed a scalable **Full Stack Ordering System** featuring real-time order status updates from kitchen to customer using **Spring Boot** following microservices principles and **React JS**.
- Built secure and structured **REST APIs** to handle order placement, menu retrieval, payment flow, and order status updates.
- Designed relational database schema and implemented optimized **SQL queries** for transactional consistency.
- Implemented validation and structured exception handling to ensure reliability under concurrent user requests.

Education

Vellore Institute of Technology
B.Tech in Computer Science and Engineering 2020 – 2024
