Professional Summary

Full Stack Java Developer (2 yrs) building scalable backend services with Java and Spring Boot and frontends with React. Founder and lead developer of **Naira Menus**, a deployed restaurant-tech SaaS now piloting with real cafe clients — owning architecture, backend, frontend, infrastructure, and go-to-market. Strong in RESTful API design, microservices, multi-tenant systems, and secure coding within Agile/CI-CD workflows. Distinctively combines software engineering with hands-on RPA and intelligent automation (UiPath, Power Automate) — including building AI agents for error detection and root-cause analysis across business-critical processes. Recognized at EPAM Systems as an **India Performance Champion** for delivering high-impact solutions and exceeding performance expectations.

Technical Skills

Languages	Java (8+, 21), JavaScript	Frontend	React (18/19), HTML5, CSS3, Bootstrap
Backend	Spring Boot 3, Spring Framework, Spring Security, JWT, JPA/Hibernate	Architecture	Microservices, REST APIs, Multi-Tenant Systems, System Design (LLD/HLD)
Databases	PostgreSQL, MySQL	Real-Time	WebSocket (STOMP/SockJS)
DevOps	Docker, Docker Compose, Nginx, Cloudflare Tunnel, Azure (VM, Managed MySQL), Git, CI/CD (GitHub Actions, Jenkins), Maven	Messaging	Kafka, JMS (foundational)
Automation	UiPath, Microsoft Power Automate, BPM platforms (Flowable)	Testing	JUnit, Integration Testing
Integrations	Webhooks, WhatsApp Cloud API, Web Serial API (ESC/POS)	AI & Tools	Claude Code, Cursor, AI Agents, Hugging Face, OpenCV
Practices	Agile/Scrum, Code Reviews, Design Patterns, Jira	PM Tools	Jira, Code360

Experience

Junior Software Engineer – EPAM Systems

May 2024 – Present

Fullstack developer on a 37-member global team for CoreLogic Credit, focused on optimization and cost reduction via Intelligent Automation and BPM solutions.

- Developed and maintained full-stack applications using **Java**, **Spring Boot** and **React JS**, integrating front-end user interfaces with core back-end automation services on a BPM platform.
- Implemented secure REST APIs using **Spring Security** to enforce authentication and authorization controls.
- Designed database models using **JPA/Hibernate** and optimized SQL queries for performance.
- Contributed to CI/CD pipelines to automate build and deployment processes, and participated in peer code reviews ensuring adherence to coding standards and security best practices.
- Cut order processing time by 64% — from 11 minutes to 4 minutes per order — through targeted system enhancements and performance optimization.
- Onboarded to an enterprise **UiPath RPA** project; currently monitoring and maintaining **50+ existing automation processes** to ensure reliability and uptime.
- Developing an **AI agent** integrated with UiPath Orchestrator logs to automate error detection, root-cause analysis, and fix suggestions — reducing manual triage time significantly.
- Building reusable **AI-driven automation components** for business use cases, improving process efficiency and reducing manual intervention across workflows.
- Earned the **India Performance Champion** award and **Fearless Problem Solver** and **Innovation Enabler** recognition badges for high-impact delivery and innovative problem-solving.

Intern – Radisys

June 2023 – August 2023

Learned 5G network fundamentals and built a tool to fetch JIRA results per user and route them to individual users and admins.

Web Development Intern – Let’sGrowMore

June 2022 – July 2022

Completed frontend development tasks using HTML, CSS, JavaScript, and React.js.

Projects

Naira Menus — QR/NFC Restaurant Ordering SaaS (Deployed Startup)

nairamenus.in

Founded and led end-to-end development as sole engineer — product, architecture, backend, frontend, infra, and deployment — of an NFC-powered digital menu and ordering platform built to replace paper menus, now live and onboarding real cafe clients in a paid pilot phase. Stack: **Spring Boot 3 (Java 21)**, **React 19**, **MySQL**, **Docker**, **Nginx**, **Cloudflare**, deployed on an **Azure VM** with **Azure Database for MySQL** (managed).

- Architected **multi-tenant, multi-outlet** data isolation — a single tenant boundary scaling to unlimited outlets per organization under one owner login, with role-based access control (Owner/Manager/Admin) and cookie-token outlet switching.
- Implemented stateless **JWT authentication** using HttpOnly cookies (no Spring Security) with a 3-tier token-priority resolution chain, read-only support impersonation for customer-support debugging, and a custom request rate-limiting filter.
- Built 3 separate React frontends — customer-facing menu, admin dashboard, and operations console — sharing a common Spring Boot backend.
- Delivered real-time kitchen and table-call updates over **WebSocket (STOMP/SockJS)** with topic-scoped subscriptions, cutting order-to-kitchen latency to sub-second.
- Engineered driverless thermal receipt printing, streaming raw **ESC/POS** bytes directly via the Web Serial API (58/80mm, auto-cut) — eliminating the need for printer driver installs — with automatic PDF-dialog fallback for unsupported devices.
- Integrated 2 external platforms: **UrbanPiper** food-aggregator (webhook-based order ingestion) and **Meta WhatsApp Cloud API** for order notifications, plus a fail-open menu transliteration service for regional-language menus.
- Deployed and self-hosted the full stack on an **Azure VM**, with data persisted in a managed **Azure Database for MySQL** instance for automated backups and patching.
- Containerized 4 services with **Docker Compose + Nginx + Cloudflare Tunnel**, exposing public HTTPS with zero open inbound ports, and automated deploys via **GitHub Actions CI/CD**.
- Backed core services with **31 unit/integration test suites (JUnit)** covering auth, billing, ordering, and entitlements.
- Designed, built, and shipped the public-facing marketing website (nairamenus.in) used for client acquisition and onboarding.

GenCheck — AI Content Authenticity Detector

[GitHub](#)

- Built a multi-modal platform that verifies the authenticity of text, image, and video content using **Hugging Face** models and **OpenCV**, structured as 3 backend microservices (Spring Boot, Python Flask) with a React frontend.
- Designed clean API contracts and modular service boundaries separating detection, processing, and serving concerns for scalability and maintainability.

DeezNews — News Aggregator Web App

[GitHub](#)

- Built a dynamic news web application using **React** and **Bootstrap**, integrating the NewsAPI to fetch up-to-date articles across categories like technology, business, and entertainment.

Certifications

- [Claude 101](#)
- [Building with the Claude API](#)
- [Claude Code in Action](#)
- [Introduction to Model Context Protocol](#)

Education

Vellore Institute of Technology, Vellore, India
B.Tech in Computer Science and Engineering

2020 – 2024

Currently Exploring

- AI Engineer Core Track: LLM Engineering, RAG, QLoRA, and AI Agents (Udemy)
- System Design from Basics to Advanced — Low-Level and High-Level Design (Udemy)
- Web3 & Blockchain Fundamentals (Coursera) — Completed
